

# Write Plain Text Element

The element gets message(s) with text data and saved the data to the specified text file(s).

**Element type:** write-text

## Parameters

Parameter	Description	Default value	Parameter in Workflow File	Type
<b>Data storage</b>	Place to store workflow results: local file system or a database.		<b>data-storage</b>	<i>string</i>
<b>Output file</b>	Location of the output data file. If this attribute is set, then the "Location" slot is not taken into account.		<b>url-out</b>	<i>string</i>
<b>Output file suffix</b>	This suffix will be used for generating the output file name.		<b>url-suffix</b>	<i>string</i>
<b>Existing file</b>	If a target file already exists, you can specify how it should be handled: either overwritten, renamed or appended (if supported by file format).	Rename	<b>write-mode</b>	<i>numeric</i>  Available values are: <ul style="list-style-type: none"><li>• 0 - for overwrite</li><li>• 1 - for append</li><li>• 2 - for rename</li></ul>
<b>Accumulate objects</b>	Accumulates all incoming data in one file or creates separate files for each input. In the latter case, an incremental numerical suffix is added to a file name.	True	<b>accumulate</b>	<i>boolean</i>

## Input/Output Ports

The element has 1 *input port*.
